2.70

Course Description

This course introduces the study of the psychological and neurobiological factors that enable humans to acquire, use, and understand language. Modern psycholinguistic research makes use of biology, neuroscience, cognitive science, and information theory to study how the brain processes language. Topics covered include the biological bases of language including methodologies used to study brain processes underlying language comprehension and use, the time course of linguistic processing, infant language acquisition, speech processing and production, and developmental language disorders and aphasia.

Language(s) of Instruction

English
