Course Description
This course covers ethical issues in health care, medicine, and biotechnology. It examines fundamental ethical concepts such as the value of life, individual freedom, justice, cultural differences, and universal moral values. The course explores a wide range of bioethical topics from the beginning of life to the end of life, and from patient-physician relationships to global matters. It examines key bioethical principles and concepts such as value of life, informed consent, freedom, beneficence, justice, cultural diversity, and universal morality.
