Course Description

Global Health is the research and practice of improving health and wellbeing worldwide. Health has many determinants, and these exceed the 'biomedical' domain. This course uses the framework of the Sustainable Development Goals, a global agenda for 2015 to 2030 that was agreed on by the United Nations General Assembly. Students explore major global health challenges of our time - such as Covid-19 and environmental health - and address current and desired interventions to tackle these challenges in an equitable way. As an interdisciplinary approach is required to tackle the global challenges, interprofessional collaboration and skills are practiced throughout the course.
