COURSE DETAIL

HARDWARE

Country
United Kingdom - England

Host Institution
Imperial College London

Program(s)
Imperial College London

UCEAP Course Level
Upper Division

UCEAP Subject Area(s)
Computer Science

UCEAP Course Number
113

UCEAP Course Suffix

UCEAP Official Title
HARDWARE

UCEAP Transcript Title
HARDWARE

UCEAP Quarter Units
5.00

UCEAP Semester Units
3.30

Course Description
This course explores the fundamental principles and devices used in the design of digital computers, including how primitive control logic can be organized to construct a programmable machine. The course covers Boolean algebra, combinatorial logic functions, principles of semiconductor devices and logic gates, adders subtractors and multipliers, bistable storage devices, S-R flip-flop, D-type flip-flop, latch versus edge triggering, J-K flip-flops, registers, shift registers, multiplexers and decoders, counters, finite state machine design, static and dynamic RAM, register transfer descriptions, ALU design and CPU design. Practical laboratory work consists of the design of combinatorial and sequential circuits using modern VLSI design tools.

Language(s) of Instruction
English

Host Institution Course Number
C112

Host Institution Course Title
