UCEAP Course Suffix
UCEAP Official Title THE BRAIN THROUGHOUT LIFESPAN
UCEAP Transcript Title BRAIN THRU LIFESPAN
UCEAP Quarter Units 4.00
UCEAP Semester Units 2.70

Course Description

This course is based on the idea that there are other ways of approaching the study of brain structure and function beyond the conventional focus of parsing cognitive, affective, and other functions using standard tools such as brain imaging. Much research has been conducted at the intersection of the brain, other disciplines, and society at large. These topics vary greatly, but include the impact of the brain sciences on the courtroom to understanding the nature of the brain's response during aesthetic experience, or the neurobiology of poverty, and the effect adversity on development. The course broadens and deepens students' understanding of the cognitive and brain sciences as they impact on the individual and their place and interaction with development, family, and society at large.
