Course Description

This course defines the basic characteristics of different types of stem cells and discusses their applications in medicine. Topics include the implications of stem cell technologies on individuals, families, societies, and humankind; principles of biomedical ethics and the application of ethical and moral understanding to evaluate the benefit and dilemma of stem cell technologies brought to the society; how to analyze and evaluate case scenarios for informed decision making and recommending strategies for stem cell research policy making; how to recognize the positions taken by different individuals, organizations and cultures with respect to stem cell technologies; and how to represent viewpoints other than their own.
