**UCEAP Semester Units**

4.00

## Course Description

In many situations, economic actors need to make decisions while knowing that the final outcome also depends on the decisions of others. Such situations are called games, and the actors involved are called players. In order to reach a good decision, it is important for a player to reason about the decisions and motivations of their opponents. This course teaches how to reason about your opponents in game theoretic situations, and how to use this reasoning to make good decisions. The theory is applied to various economic situations of interest.
