**UCEAP Quarter Units**

6.00

**UCEAP Semester Units**

4.00

## Course Description

This course takes a multidisciplinary approach to understand how complex social behaviors, like morality and empathy, arise from a brain network that has evolved to support much simpler mechanisms. The course covers the social brain's basic anatomy, how this brain is driven by simple hormonal mechanisms, how these factors can underlie complex social behavior, and how they influence psycho pathology in its many forms. Prerequisites include a general understanding of psychology and the biological foundations of behavior.

## Language(s) of Instruction

English
