Course Description

This course provides an introduction to interdisciplinarity and in particular, its role in breaking down traditional boundaries and creating new kinds of knowledge. The course addresses issues facing those conducting interdisciplinary work and look into how they play out in practice. Students examine how and why disciplines exist alongside issues that can impede the integration of different disciplinary perspectives through, for example, different conceptions of truth, power and evidence. The course combines this with looking at different ways of overcoming these issues including by means of ''superconcepts."
