LANGUAGE, COGNITION, AND THE BRAIN
Country Denmark
Host Institution Aarhus University
Program(s) Aarhus University
UCEAP Course Level Upper Division
UCEAP Subject Area(s) Psychology Linguistics
UCEAP Course Number 115
UCEAP Course Suffix
UCEAP Official Title LANGUAGE, COGNITION, AND THE BRAIN
UCEAP Transcript Title LANG COGNTN & BRAIN
UCEAP Quarter Units 8.00
UCEAP Semester Units 5.30

Course Description

This course provides fundamental knowledge of the issues, insights and methods of psycholinguistics. It also trains basic methods for data collection, data processing, statistical analysis, academic argumentation and presentation. The course includes various cognitive models which form a bridge between language as a communicative phenomenon and language as part of human biology. The course provides insight into and experience of using basic tools connected to the planning, implementation, and statistical analysis of a scientific experiment. The course also provides insight into some of the psychological and neurobiological processes which are the foundation of language. Students also acquire skills in quantitative research which can be used in independent work. The course is closely linked to analytical courses in phonetics/phonology, grammar, semantics and pragmatics, and to courses in conversation analysis, language development, and sociolinguistics.

Language(s) of Instruction
English
