115

**UCEAP Course Suffix****UCEAP Official Title**

LANGUAGE, COGNITION, AND THE BRAIN

**UCEAP Transcript Title**

LANG COGNTN & BRAIN

**UCEAP Quarter Units**

8.00

**UCEAP Semester Units**

5.30

## Course Description

The purpose of the course is to give the student fundamental knowledge of the issues, insights, and methods of psycholinguistics. Students also train basic methods for data collection, data processing, statistical analysis, academic argumentation, and presentation. The course includes various cognitive models which form a bridge between language as a communicative phenomenon and language as part of human biology. The course provides the student with insight into and experience of using basic tools connected to the planning, implementation, and statistical analysis of a scientific experiment. The course also provides students with insight into some of the psychological and neurobiological processes which are the foundation of language. The student also acquires skills in quantitative research which can be used in independent work, for instance in their Bachelor's project, their Master's thesis, or in professional contexts. Knowledge of the topics of the course is important for language teachers, teachers, language researchers, speech therapists, supervisors in literacy programs and others.
