Course Description

This course offers a study of the nervous system and its functions. The course explores the scientific study of the central and peripheral nervous systems as well as some of the latest developments in neuroscience. The course focuses on the nervous system's regulation of our somatic homeostasis by discussing topics such as the anatomy and functions of important neurological structures, the hippocampus, the corpus callosum, the pre- and postnatal development of the brain, and neurotransmission. This course consists of tutorial group meetings, lectures, and labs.
