Course Description
This course explores two significant topics impacted by technology. Illegal activities online generate threats to information resources and pose serious risks to national, economic, organizational and personal security. Topics like hacking, identity theft, cyber terrorism, child pornography, as well as legal and technical countermeasures used by governments and organizations are covered. The course also covers fundamental principles of copyright law and its adjustments facing technology. It reviews copyright issues from a socio-economic, legal and policy perspective, and covers issues such as fair-use exceptions, the open-source movement, digital rights management and anti-circumvention and peer-to peer file sharing.
