COURSE DETAIL

LIGHTING DESIGN FOR SPACES
Country United Kingdom - Scotland
Host Institution University of Edinburgh
Program(s) University of Edinburgh
UCEAP Course Level Upper Division
UCEAP Subject Area(s) Art Studio
UCEAP Course Number 102
UCEAP Course Suffix
UCEAP Official Title LIGHTING DESIGN FOR SPACES
UCEAP Transcript Title LIGHTING DESIGN
UCEAP Quarter Units 8.00
UCEAP Semester Units 5.30

Course Description
This course will investigate lighting fundamentals for spaces in relation to interior and architectural design contexts. Through a series of case studies and practical lighting workshops, students will explore how lighting affects spaces and learn how to design and specify their own lighting strategies for a design project. This course involves students attending a series of lectures/seminars and building visits where the fundamentals of lighting design are explained and explored, using relevant case studies from the built environment. Supplementary workshops will engage students in practical lighting studies and demonstration of lighting techniques. Students will be tasked with applying the skills taught to a series of design problems, looking at existing building scenarios and further application of an aspect of lighting design to a project of their choice. Students will gain first-hand experience of working with different lighting scenarios using both daylight and artificial light through the creation and representation of their own lighting strategies.
