Course Description

This course provides an introduction to data analytics using the R language. It also provides students with notions of data management, manipulation, and analysis as well as of reproducible research, result-sharing, and version control (using GitHub). At the end of the class, students are able to automatically extract data from websites and create interactive web apps as well as dynamic reports to visualize and analyze them. They are also able to construct their own R packages, make them available on GitHub and use literate programming to document them. Tentative list of topics that are discussed in this class are: Reproducible Research: knitr and rmarkdown; Version control: Github; Introduction to programming: Data structures, logical operators, control structures and functions; Visualizations: Exploratory data analysis with Base R and ggplot2; R packages: Construction of R-packages using devtools, roxygen2, pkgdown; Web Scraping: Automatic extraction of data from websites using rvest and quantmod; Web applications: interactive web apps using Shiny.
