Course Description

This course studies emotion from different cognitive-social and biological perspectives and understands its role in guiding/motivating human behavior. The course starts with the classic theories of emotion and then continues with several relevant topics, including: cognitive and biological perspectives on causation of emotion and motivation; emotion regulation and self-determination; social-communicative functions of emotion expressions; the interaction between genes, stress, and affective-emotional behavior; the relation between sleep, emotion regulation, and affective behavior; topics related to emotion and motivational problems as seen in work stress or problems with goal setting.
