Course Description

This course focuses on the biological underpinnings of human social cognition and behavior, including neural, hormonal, and genetic mechanisms. It integrates multiple levels of analysis (biological, psychological), as well as different perspectives (basic, clinical, applied) to understand classic social psychological processes. Topics include: social cognition/theory of mind; empathy and understanding others; cooperation and prosocial behavior; interpersonal relationships; the self/agency; morality; anti-social behavior. Finally this course discusses basic methodological approaches to the study of social neuroscience and emerging issues in the field.
