**UCEAP Quarter Units**

6.00

**UCEAP Semester Units**

4.00

## Course Description

The course investigates topical environmental themes important to the well-being of our planet within the context of a long-term perspective (using palaeoscience approaches). It encourages students to publicly participate in the themes developed by the creation and maintenance of a weblog site. Lectures introduce either an ecosystem or environmental problem, followed by an overview of how that ecosystem functions, or how the environmental problem manifests itself. Lectures conclude with case studies detailing how a palaeoscience perspective adds to understanding of the ecosystem under threat, or problem identified.

## Language(s) of Instruction

English

## Host Institution Course Number

GEOG0044

## Host Institution Course Title

GLOBAL ENVIRONMENTAL CHANGE
