Course Description

The course provides a study of macroeconomic theory and its analytical approach to the economic system, as well as its application to economic problems and policies. The course examines the determination of equilibrium in product market, money market, and foreign exchange market with the use of IS-LM-BP model, as well as changes in equilibrium. Topics covered include interaction of product market and labor market, the model of aggregate demand and aggregate supply in closed and open economies, inflation, unemployment, the Phillips curve, stabilization policies, growth theory, New Keynesian economics, and the real business cycle theory.
