Course Description

This course examines the philosophy and basic concepts of operations management. The course defines the major activities associated with defining, organizing, planning, monitoring, and controlling projects; discusses the four major process decisions; presents systematic ways to analyze processes; explains and constructs control charts; identifies systematic approaches to capacity planning; presents the theory of constraints; presents key factors that determine the appropriate choice of an inventory system; and explores how to design an effective supply chain, and how to measure its performance.
