Course Description

This course examines game theory, a framework for studying situations of strategic interdependence. Students describe and analyze such situations formally, as well as how the theory can be applied in economics, political science, law, and elsewhere. Topics include games in strategic and extensive form, backward induction, dominance, choice under uncertainty, pure and mixed strategy Nash equilibrium, imperfect information, coordination and outguessing games, the prisoners' dilemma, subgame perfection, and repeated interaction. The course is taught on historical principles, with attention to the founders and intellectual development of game theory.
