## **Course Description**

This course introduces the modern approach to macroeconomics and how to apply it to analyze macroeconomic issues. The main purpose of the course is to introduce the methods to study macroeconomics, not the facts and the theories. The course begins with the basic facts and issues in macroeconomics. Topics include: money and inflation; the open economy; unemployment; growth theory; economic growth; business cycle theory; economic fluctuations; aggregate demand; aggregate supply and the Phillips Curve; macroeconomic policy debates; stabilization policy; government debt; consumption; and investment. The course devotes a substantial amount of time to the study of the impact of fiscal and monetary policies. Students examine how different markets work together in general equilibrium. Markets for labor, saving and investment, and financial assets interact to determine the economy's long-run growth and its fluctuations. Text: N. Gregory Mankiw, MACROECONOMICS. Assessment: problem set (10%), midterm (35%), final (55%).
