Course Description

This course is an introduction to the key principles of sustainable development and the application of such principles in real world situations. These principles include: the social, environmental and economic pillars of sustainable development; global population, poverty and aid considerations; and the value of multiple sets of knowledge, in particular indigenous knowledge. A diverse set of case studies and issues of concern are addressed throughout the course and include: climate change; resources and waste; circular economy; biodiversity offsets; tourism industry; local community-government partnerships; and the options before us for the future development of human society in a world of limited carrying capacity.
