UCEAP Semester Units

3.30

Course Description

Students study the broad concepts of sustainable development. This course covers the topics of sustainability as a holistic and urgent societal issue, the role of diets in sustainability, environmental impacts of agriculture, sustainability advances in the food, drink, and drug industry, including how these are assessed using Life Cycle Analysis. This course focuses on societal aspects of a sustainable transition and practical sessions focus on techniques relevant to the biotechnology industry, sustainability of food production, and health indices of global diets.
