Course Description

Phonetics is concerned with the sounds of the spoken languages of the world. This course addresses questions such as the following: In human speech, how are sounds produced and perceived? How can they best be described and represented? How can we assess them better or differently through the use of computers? The course also includes practice in the production of a variety of sounds from different types of languages. This course covers topics in phonetics, including but not limited to acoustic phonetics, articulatory phonetics and auditory phonetics. This course introduces and analyzes segments and suprasegments of world languages with respect to theories of phonetics sciences.
