Course Description

Analytics (information resulting from the systematic analysis of data) contribute significantly to smart decision-making in this Industry 4.0 era. This course promotes "System 2 thinking" via the scientific paradigm of Data, Model and Decisions for complex business and organizational problems. The course focus is on the appreciation and the applicability of select analytical tools for informed managerial decision-making rather than their technicalities. The course examines the applications arising in finance, marketing, management of human resources, supply chain management, and the media.
