UCEAP Semester Units 4.00

Course Description

This course provides an understanding of key issues and applied methodologies relating to management accounting frameworks used by managers when faced with making financial decisions in the context of the business environment. The focus is on information for cost management, budgetary control, and short and longer term financial decision making. It examines the blend of financial analysis and managerial judgment required to make sound decisions. In particular there is an emphasis on issues in overhead cost recovery; contribution costing and CVP analysis; costing issues in the context of a competitive environment, including activity based costing (ABC); relevant costs for decision making; core investment appraisal techniques (ARR, Payback, NPV and IRR); budgetary control, variance analysis, and standard costing.
