UCEAP Semester Units

1.00

Course Description

Taiwan has the fastest aging rate in the world. While encountering this important change, relevant health topics become important. This course examines the epidemiologic research and related topics on aging and common disease in the elderly. Students read essential literature in relation to the elderly. The first half of each lecture provides an overview of a specific topic and the latter half of class consists of literature discussion and critique. Students are required to prepare a final report. This course aims to bring topics related to aging and elderly disease to the practice of public health.
