**UCEAP Semester Units**

2.70

## Course Description

This course provides an overview of the study of the development of children and adolescents. Students will learn about the changes that occur across different domains of development throughout infancy, childhood, and adolescence. Students learn about developmental theories, themes, and concepts, and about the methods involved in developmental research. The addresses critical issues and frameworks that shape how we understand and study development, such as the interacting roles of nature and nurture in development, debates about continuity and discontinuity in development, the influence of the socio-cultural context on development, the role of children in their own development, and the interaction of the social, cognitive, and biological domains in development.
