Course Description

This course teaches the usage of R for the analysis of ecological data. It introduces several different analysis options for biological or ecological data (focusing specifically on community-level data) using the free and open-source statistical, mapping, and graphing platform R. Broad topics covered will include: introduction to R language and basic functions / graphics; basic mapping options; diversity measurement; univariate, multivariate, parametric and non-parametric analysis and their basis; functional diversity; and ecological time series analysis. Students will require a laptop for sessions. Schedule is subject to changes according to student progress.
