UCEAP Semester Units

4.00

Course Description

What makes planet Earth so remarkable? Our planet is shaped by many interacting environmental systems operating from atomic through to global scales. Understanding the science of these systems is central to developing an advanced knowledge of the physical environment. This course explores fundamental Earth surface systems (e.g. tectonics, atmosphere & oceans, landscape development, climate change), focusing on core concepts, processes, their significance within a broader environmental context and their relevance to the human species.
