4.00

## **Course Description**

Corporate finance deals with the financing and investment decisions made by the management of companies in the pursuit of shareholder wealth maximization. The course gives a broad overview of important issues in corporate finance and combines insights from economics, business, and psychology. The economic side of corporate finance deals with the maximization of shareholder wealth. To do so, managers aim at securing the greatest possible return in exchange for accepting the smallest amount of risk. For instance, a company can finance itself by borrowing money from banks, by issuing bonds or through the stock market. These types of decisions influence the expected return and risk of the company. Traditional economics assumes that managers and investors are rational self-interested people. However, there is a large body of evidence from social psychology and behavioral economics that people often act irrationally and behave pro-socially by taking the social impact of decisions into account. The course also shows how decision making biases influence managers and investors in their financial decisions and how social preferences impact factors such as corporate social responsibility. The course is largely based on real life cases that we discuss in an interactive manner. Students debate on topics such as “should CEO bonuses be reduced?” and “is it important for firms to put corporate social responsibility high on their agenda?”
