## Course Description

Physiology is the science of studying the function and mechanism of living bodies. This course introduces the relationship between physiology and human health in the form of classes. It aims to make students master the law of life activities and maintain physical and mental health by teaching the physiological functions of blood, circulation, respiration, urinary, digestion and nervous system. This course systematically introduces the basic knowledge of the physiology, from micro to macro. While discussing the basic rule of higher animal life activities as well as the importance of human health, the course examines important discoveries in the history of the development of physiology and embodied in the process of scientific thought, the concept of innovation, and dedication to science. Students not only get the physiology knowledge theory, value, and know their own physical and mental health, but also increase their scientific thought and scientific spirit.
