### **Course Description**

This course teaches the intricacies of the interaction between animal and plant parasites and their host. The focus is on current topics in the field of host-parasite interactions, including recent insights from many other disciplines such as ecology, soil biology, molecular and cell biology, plant and animal physiology, biotechnology, immunology, and genetics. Besides developing a more integrative view of host-parasite interactions as a broad biological phenomenon, students also discuss how this knowledge can be translated into better human, animal, and plant health. This course uses the development of effective writing skills help to deepen the understanding of a topic.
