Course Description
This course provides a comprehensive understanding about recent developments of international financial markets. Particular focus is on linkage between financial markets and real economic activities, potential risks observed in financial markets, and the effects of (unconventional) monetary policies recently taken by central banks in advanced economies on financial markets at home and abroad. Throughout the course, it refers basic theories and empirical studies regarding asset pricing, banking, and information asymmetries, as well as reports released by international institutions including IMF and BIS.
