Course Description
This course explores human population issues and problems in our contemporary world from a geographical perspective. It focuses on theories and definitions in population geography, patterns and trends in fertility, mortality and migration of human populations in different parts of the world, how population issues are shaped by economic, political, social, cultural, and environmental changes. Topics covered include high level of fertility in poor countries, aging population in advanced economies, migration, and the HIV-AIDS pandemic and major health problems in different parts of the world.
