COURSE DETAIL

WEB DATA MINING

Country
China

Host Institution
Peking University, Beijing

Program(s)
Peking University

UCEAP Course Level
Upper Division

UCEAP Subject Area(s)
Computer Science

UCEAP Course Number
161

UCEAP Course Suffix

UCEAP Official Title
WEB DATA MINING

UCEAP Transcript Title
WEB DATA MINING

UCEAP Quarter Units
3.00

UCEAP Semester Units
2.00

Course Description

With the explosive growth of web content (texts, web pages, and images), existing search engines usually return lots of results to users, but useful information and knowledge from the search results is rare. It is feasible to analyze the large and heterogeneous web content from different dimensions, and dig out semantic knowledge by using data mining and natural language processing techniques. Based on the semantic knowledge, users can perform knowledge-based retrieval. This course introduces the fundamental techniques for web data mining and several advanced research topics. Topics include search engines, link analysis and web page ranking, query analysis and expansion, information filtering and recommendation, web information retrieval, question answering, document summarization, machine translation, sentiment analysis and opinion retrieval, object-level vertical search, mobile search, and social network analysis.
