4.50

UCEAP Semester Units

3.00

Course Description

Computational social science is a new paradigm in social science that actively utilizes the methodologies of computer science and statistics for collecting, producing, and analyzing large-scale data sets. This class introduces a set of methodologies used in computational social science and how they change social science research designs and practices. It also discusses institutional and ethical issues that arise as a result of the widespread use of automated algorithms for managing massive data sets in the private and public sectors.
