Course Description

This course provides a survey of environmental policy from the perspective of economics. Topics include principles of environmental economics, air pollution, and waste management. It focuses on the application of economic concepts to the analysis of environmental policy and the consequences of economic behavior on the environment. The main aim of the course is to learn how basic economic concepts can be applied to the analysis of economic and social incentives concerning individual and collective decision-making in the context of the environment. Prerequisite: Principle of Microeconomics.
