Course Description

This course introduces the issues of digital ethics and AI faced by individuals and organizations. It covers the ethical principles governing the behaviors and beliefs about how we use technology, and how we collect and process personal information in a manner that aligns with individual and organizational expectations for security and confidentiality. It addresses challenges in balancing technological desirability with social desirability while developing digital products and services. Key topics include Professional Ethics, Artificial Intelligence Ethics and Governance, Automation and Autonomous Systems, Digital Ethics by Design, Data Protection in ICT, Human Machine Interaction, Computing for Social Good, Digital Intellectual Property Rights, and Digital Divide, Equity, Accessibility, and Inclusion.
