Course Description

This course analyzes financial data in Microsoft Excel using Pivot Tables and various Excel financial functions and financial concepts. These concepts include capital budgeting and time value of money, corporate bonds and stock valuation models, discounted cash flows, portfolio analysis and the capital asset pricing model, forecasting sales and profits, measuring investment performance, financial sales analysis, and cost and profit analysis. The course combines the basic theory of finance with the intensive implementation of all concepts in Excel to provide a better understanding of financial theory and valuable skills in Excel.
