UCEAP Semester Units

3.00

Course Description

This course provides students with an introduction into European environmental and climate politics and policy. Theories on European integration are discussed and students consider their explanatory value in understanding the emergence of environmental and climate policy. Special attention is paid to the European Union's institutional set-up and the actor constellations involved in policy-making processes. The course then reviews the policy cycle and explores the influence of different actor groups on the initiation, agenda setting, decision-making and implementation of European environmental policy. The focus is on regulatory areas related to the environment, climate change, and energy policy. Students consider the problems, debates, and decisions, and compare political expectations and results.

Language(s) of Instruction
English
