

# COURSE DETAIL

## IMPLEMENTATION OF PROGRAMMING LANGUAGES

**Country**

Denmark

**Host Institution**

University of Copenhagen

**Program(s)**

University of Copenhagen

**UCEAP Course Level**

Upper Division

**UCEAP Subject Area(s)**

Computer Science

**UCEAP Course Number**

130

**UCEAP Course Suffix****UCEAP Official Title**

IMPLEMENTATION OF PROGRAMMING LANGUAGES

**UCEAP Transcript Title**

IMPLEMENT PROG LANG

**UCEAP Quarter Units**

6.00

**UCEAP Semester Units**

4.00

## Course Description

This course provides insight into how programs written in high-level language are implemented on a computer. It covers various elements of interpretation and translation of programming languages: lexical analysis, syntax analysis, type checking, interpretation, code generation, register allocation, and storage management. It reviews the basic methods for implementing these elements, including the use and operation of semi-automatic tools. In connection with lexical analysis and syntax analysis, the course demonstrates how descriptions that are convenient for people (respectively, regular expressions and context-free grammar) are transformed into automata that are convenient for machines. These transformations are the foundation for tools that can automatically produce lexical analyzers and syntax analyzers based on descriptions. In connection with the generation of intermediate and machine code, the course reviews how machine code can be generated on the basis of the syntactic structure of a program and presents different methods for optimizing code.

### Language(s) of Instruction

Danish

### Host Institution Course Number

NDAB16006U

### Host Institution Course Title

IMPLEMENTERING AF PROGRAMMERINGSSPROG

### Host Institution Course Details

<https://kurser.ku.dk/course/ndab16006u/2022-2023>

### Host Institution Campus

### Host Institution Faculty

Science

### Host Institution Degree

Bachelor

**Host Institution Department**

Computer Science

**Course Last Reviewed**

2022-2023
