UCEAP Transcript Title SUSTNBL DEVL&HEALTH
UCEAP Quarter Units 2.00
UCEAP Semester Units 1.30

Course Description

This course requires permission from the UCEAP Faculty Director to enroll. The course addresses four main topics (climate change and health, urbanization and health, water and health, and food and health) strictly linked to UN Sustainable Development Goals (SDGs) 2030 and related to distal and proximal determinants of health. The course provides the basis of systemic thinking for the improvement of surveillance programs, timely response to emergencies, and economic savings by applying the One Health (OH) approach. The course demonstrates the need for an integrated and cross-sectoral approach toward the achievement of the Agenda 2030 SDGs and provides basic knowledge on the main issues related to health at the human/animal/environment interfaces. The course asserts that health is a precondition, an outcome and an indicator of sustainable development.
