## **Course Description**

How can we understand the relationship between gender and environment? And what can feminist thinking contribute to debates on the current ecological crisis and the needed sustainability transition? Drawing on feminist and gender scholarship the course introduces students to key theories and debates including ecofeminism and feminist political ecology. Over the course of the seminar we look at early critiques of the women-environment nexus to more recent debates on care politics or posthumanism. Through diverse empirical examples of topics such as agrifood regimes, climate change, natural resources and environmental activism this course addresses the gender dimensions of environmental issues.

## Language(s) of Instruction

English
