Course Description

This course introduces basic concepts and methods of statistics as a tool to perform appropriate data analyses. The statistical software R is taught alongside the material to introduce statistical computing. Students learn to load raw data, make numerical and graphical summaries of data, and conduct various estimation and testing procedures. Topics include programming in R, descriptive statistics, concepts of probability, random variables and probability distributions, sampling distribution, statistical estimation, hypothesis testing, linear regression, and applications to real-world problems.
