UCEAP Semester Units

2.00

Course Description

This course studies Machine Learning, an important sub-area of Artificial Intelligence. It is designed to help students understand some key technologies such as linear classifiers, support vector machines, decision trees and neural networks, through the process of applying them to actual data and developing Python programs.

This course aims to instruct students on machine learning and basic skills on data processing. Students will be expected to read and write Python programs and modules by the end of the course.

Language(s) of Instruction

Japanese
