COURSE DETAIL

INTRODUCTION TO ECONOMETRICS USING R

Country
France

Host Institution
Sciences Po Reims

Program(s)
Sciences Po Reims

UCEAP Course Level
Upper Division

UCEAP Subject Area(s)
Economics

UCEAP Course Number
120

UCEAP Course Suffix

UCEAP Official Title
INTRODUCTION TO ECONOMETRICS USING R

UCEAP Transcript Title
INTRO ECONOMETRICS

UCEAP Quarter Units
4.50

UCEAP Semester Units
3.00

Course Description

This course teaches the fundamentals of econometrics, in particular regression analysis and statistical inference. It purposefully starts at a level that assumes no prior knowledge of statistics, econometrics, or programming. The objective is to understand and interpret simple and multiple linear regressions and detect whether an analysis uncovers correlations or causality. The course does not rely on advanced math; rather it uses practical learning to teach the main concepts. Moreover, it introduces how to use R, a very powerful and widely used programming language, to perform data cleaning and undertake statistical analyses. By the end of the course, students carry out small-scale research projects using real-world data and regression analysis to reveal associations between various variables.

Language(s) of Instruction
English
