Course Description

This course examines neurochemical and physiological bases of the body, as well as the anatomical-functional organization of the endocrine system and its relation to the nervous system. It identifies the anatomical structure and studies the principles of analysis, coding, and representation of sensory information in the sensory systems: taste, smell, balance, hearing, vision, somesthesia, and pain. Other topics include: general principles of anatomical-functional organization of motor control; brain mechanisms of attention; characteristics of the states of dream and vigilance; main characteristics of motor disorders, perception, sleep and attention.
