Course Description

This course examines options for the transport of forest products. It covers soil engineering characteristics and low-cost methods to determine the bearing capacity of subgrade soils; vehicle/road interaction; legal regulations for heavy vehicles operating on New Zealand public roads; forestry truck and trailer designs and their impact on load capacity and vehicle safety; road design for forest roads and the design of low-cost water crossings and drainage structures; application of RoadEng road design software; and cost estimation and contract management for road construction.
